ABOUT THE AUTHORS

Dr. Tasneem K.H. Khan is working as Assistant Professor with Anjuman College Of Engineering & Technology, Nagpur (NAACAccredited). She is having 18 years of teaching experience. She did her Ph.D from Rashtra Sant Tukadoji Maharaj Nagpur University , Nagpur. Her area of interest is Medicinal Chemistry and Environmental Chemistry. Number of research papers have been published in journals and conferences.

Dr. Dilipkumar Bhupenchandra Rana is having teaching experience of 15 years that includes 13 years in Engineering and 2 years in Science College. Presently he is working as Associate Professor in S. B. Jain Institute of Technology, Management and Research, Nagpur (NAAC Accredited with "A" Grade). He has served as environmental analyst in Environment Division of Ambuja Cements Pvt. Ltd. at Chandrapur, Maharashtra. He also worked as "R & D" (Research and Development) chemist in a drug manufacturing unit in Chandrapur, Maharashtra.
His specialization is Physical Chemistry and elective as Environmental Chemistry. His Ph. D work in "Greywater i.e. domestic waste water treatment won national and international prizes. His portable greywater water system has been awarded by a Copyright by Government of India.

Dr. Gaurav Bhosekar has teaching experience of 12 years in engineering colleges and 1 work experience in industry. Presently he is working as Assistant Professor in Jhulelal Institute of Technology, Nagpur. He has also worked as a Project Assistant at National Chemical Laboratory, Pune for 2 years.
He has received Ph.D degree from University of Kiel, Germany. He is specialized in Inorganic and Industrial Chemistry. His work focuses on Inorganic Solid State Aspects of Coordination Polymers: Synthesis, Structure and Properties of New Transition Metal Complexes.
He has published 14 research papers in various international journals. Also, he has presented papers in various international and National conferences. He has received financial aid for his research work from BCUD, SP University of Pune.

Dr. Mrs. Archana P. Shetye is having teaching experience of 11 years. Presently she is working as an Assistant Professor at Priyadarshini Indira Gandhi College of Engineering, Nagpur. She has completed her M. Sc. (Organic Chemistry) and Ph.D. from Swami RamanandTeerthMarathwada University, Nanded. Her research interest is in Heterocyclic Compounds and she has published 5 International Journal publications and 35 National Journal publications.

ABOUT THE AUTHORS

Dr. Tanveer Quazi, Assistant Professor in Physics, Anjuman College of Engineering and Technology Nagpur, has 15 years of teaching Experience and published 19 research papers in International and national journals and conference proceedings. He has participated and presented 22 research papers in various international and national conferences across India and abroad. He has worked on DRDO research Fellowship, received Visiting Scientist Fellowship- ICTP Federation Scheme (Funded by UNCSCO and IAEA)), Trieste, ITALY and was awarded INSA-DST FELLOWSHIP For SRF(National Science Academy). He has also worked at BARC Mumbai. His area of research includes Physics and Materials Science.

Dr (Ms) Jasmirkaur Randhawa, Assistant Professor in Physics, Government College of Engineering Nagpur has 22 years' experience of teaching Physics at Engineering and M Sc Physics. Her research interests are Electrochemical Gas Sensors, Composite materials and Impedance Spectroscopy. She is recipient of Prof. Suresh Chandra Medal for Best Paper Presented in 4th National Conference on Solid State Ionics, IIT Bombay. She has completed MODROBS project on materials' electrical characterization. She has published 18 research papers in National and International Journals and conference proceedings, an international book chapter and edited a book. She is granted a patent on CO2 sensor.

Ms Uma V. Gaikwad, Assistant Professor in Physics, Priyadarshini Bhagwati College of Engineering Nagpur, has over 18 years of teaching Experience. She has published papers in International, national journal and two book chapters have been published in Apple Academic Press, CRC, Taylor and Francis. She has participated and presented research papers in various international and national conferences across India. Her area of research includes Physics and Materials Science.

Ms. Smita Chandar Tolani, Assistant Professor in Applied Physics. St. Vincent Pallotti College of Engineering And Technology Nagpur is recipient of Ram Chandra Chandurkar Gold Medal, K. L Seth Gold Medal, National Crystallography Award, and P. L Khare Prize in Physics. She has 16 years of teaching experience and number of publications in reputed journals, National/International conferences. She has authored a book and wrote chapters in three reputed national book publications on Physics, Research and Management. She is a columnist and writes for local newspapers. Her areas of interests include Solid State Physics, Materials Science, Vedic Mathematics, HR Management.

Dr. Prashant Ambekar, Assistant Professor in Physics, Dharampeeth M. P. Deo Memorial Science College, Nagpur since 2003 has 23 years of research and teaching experience. He has received SRF (Direct Awardee) CSIR, New Delhi and Summer Research Fellowship jointly awarded by IAS, Bangalore, INSA, New Delhi and NASI, Allahabad for three times. He has completed two minor research projects of UGC WRO, Pune and published 21 papers at National/International journals and conferences and authored an international book chapter (Taylor and Francis). He is granted a patent on CO2 sensor. He has designed and developed instruments for UG/PG laboratories. His research interest includes Electrochemical gas sensors, photocatalytic water splitting, DSSCs and nanomaterials.

Dr. Shahin Sayyad, is working as an Assistant Professor with Shri. Shivaji Science College, Amravati. She has teaching experience in Engineering and Science Colleges. He has received MANF National Fellowship for regular Ph.D work. She has published 16 research papers in reputed International and national journals and conference proceeding in India and abroad. One book chapters have been published in Advanced Nanomaterials and Nanotechnology, Springer publication. Her area of research is lead free piezoelectric materials and synthesis of nanomaterials.

Effect of Glycine Dopant on FTIR Spectrum of Ammonium Dihydrogen Phosphate (ADP) Crystal Grown by Slow Evaporation, Rotation and SR Methods

A. Z. Khan [a*ϖ] and Z. S. Khan [bϖ]

DOI: 10.9734/bpi/ntpsr/v6/2314A

ABSTRACT

Diverse molar concentrations of Ammonium Dihydrogen Phosphate crystals doped with Glycine (GADP) have been generated using different processes, including slow evaporation, rotation, and Sankaranarayanan - Ramasamy (SR) procedures. ADP crystals have found many applications in Non-linear optics, electro-optics, and transducer devices. On the developed GADP crystals, the Fourier Transform Infrared (FTIR) researches have been widely examined. The extra peaks in the FTIR spectrum that correspond to the functional groups of Glycine reveal the interaction between ADP and the dopant. The presence of all functional groups in the substance is confirmed by FTIR's standard spectrum statistics. When compared to the conventional slow evaporation method created Glycine doped ADP crystals, the spectra for ADP crystals doped with Glycine grown by Rotation and SR procedures had identical peaks with minimal variance.

Keywords: Evaporation, crystal growth, electro-optics, ADP Crystals

1. INTRODUCTION

In material science and engineering, crystal growth is a fundamental concept. The vast majority of crystal growth research has focused on practical approaches rather than hypothetical exploration. For the manufacture of greater efficiency PV cells for surrogate energy, advancements in crystal formation are critical. For initial data acquisition and devices utilized for practical purposes such as ICs and sensors, crystals of the necessary diameter and precision are required. Adding small previously prepared crystals to the prepared solutions provides nucleating sites. A single seed crystal would result in a larger crystal [1-2]. Depending on the phase conversion method, techniques of crystal growth can be classified as growth from solid, vapour, melt and solution [3]. The various methods of solution growth are studied by many researchers [4]. As the crystal growth is conceded at the room temperature, the structural impurities in the crystals grown by solution method are quite less [5].

Ammonium Dihydrogen Phosphate crystals have been extensively used as the 2^{nd}, 3^{rd} and 4^{th} harmonic generators for different laser applications which require short pulses of laser. ADP crystals have found many applications in Non-linear optics, electro-optics, and transducer devices. It is also used as Monochromator in X-ray fluorescence investigation. Numerous researchers have studied properties of pure and doped Ammonium dihydrogen phosphate crystals [6-7]. Amino acids with various molar concentrations have been used as an additive to grow ADP crystals [8]. Glycine (NH_2CH_2COOH) is considered to be the simplest amino acid among the 20 protein amino acids. In this research module; we have used amino acid Glycine as an additive in ADP in different

Dr. Tanveer Quazi, Assistant Professor in Physics, Anjuman College of Engineering and Technology Nagpur, has 15 years of teaching Experience and published 19 research papers in International and national journals and conference proceedings. He has participated and presented 22 research papers in various international and national conferences across India and abroad. He has worked on DRDO research Fellowship, received Visiting Scientist Fellowship- ICTP Federation Scheme (Funded by UNCSCO and IAEA)), Trieste, ITALY and was awarded INSA-DST FELLOWSHIP For SRF(National Science Academy). He has also worked at BARC Mumbai. His area of research includes Physics and Materials Science.

Dr (Ms) Jasmirkaur Randhawa, Assistant Professor in Physics, Government College of Engineering Nagpur has 22 years' experience of teaching Physics at Engineering and M Sc Physics. Her research interests are Electrochemical Gas Sensors, Composite materials and Impedance Spectroscopy. She is recipient of Prof. Suresh Chandra Medal for Best Paper Presented in 4th National Conference on Solid State Ionics, IIT Bombay. She has completed MODROBS project on materials' electrical characterization. She has published 18 research papers in National and International Journals and conference proceedings, an international book chapter and edited a book. She is granted a patent on CO2 sensor.

Ms Uma V. Gaikwad, Assistant Professor in Physics, Priyadarshini Bhagwati College of Engineering Nagpur, has over 18 years of teaching Experience. She has published papers in International, national journal and two book chapters have been published in Apple Academic Press, CRC, Taylor and Francis. She has participated and presented research papers in various international and national conferences across India. Her area of research includes Physics and Materials Science.

Ms. Smita Chandar Tolani, Assistant Professor in Applied Physics, St. Vincent Pallotti College of Engineering And Technology Nagpur is recipient of Ram Chandra Chandurkar Gold Medal, K. L Seth Gold Medal, National Crystallography Award, and P. L Khare Prize in Physics. She has 16 years of teaching experience and number of publications in reputed journals, National/International conferences. She has authored a book and wrote chapters in three reputed national book publications on Physics, Research and Management. She is a columnist and writes for local newspapers. Her areas of interests include Solid State Physics, Materials Science, Vedic Mathematics, HR Management.

Dr. Prashant Ambekar, Assistant Professor in Physics, Dharampeth M. P. Deo Memorial Science College, Nagpur since 2003 has 23 years of research and teaching experience. He has received SRF (Direct Awardee) CSIR, New Delhi and Summer Research Fellowship jointly awarded by IAS, Bangalore, INSA, New Delhi and NASI, Allahabad for three times. He has completed two minor research projects of UGC WRO, Pune and published 21 papers at National/International journals and conferences and authored an international book chapter (Taylor and Francis). He is granted a patent on CO2 sensor. He has designed and developed instruments for UG/PG laboratories. His research interest includes Electrochemical gas sensors, photocatalytic water splitting, DSSCs and nanomaterials.

Dr. Shahin Sayyad, is working as an Assistant Professor with Shri. Shivaji Science College, Amravati. She has teaching experience in Engineering and Science Colleges. He has received MANF National Fellowship for regular Ph.D work. She has published 16 research papers in reputed International and national journals and conference proceeding in India and abroad. One book chapters have been published in Advanced Nanomaterials and Nanotechnology, Springer publication. Her area of research is lead free piezoelectric materials and synthesis of nanomaterials.

Chapter 12

Analysis and Comparison of Psychological Constraints Among Various Countries During COVID-19

Tanu Rizvi
Shri Shankaracharya Technical Campus, Bhilai, India

Devanand Bhonsle
Shri Shankaracharya Technical Campus, Bhilai, India

Ruhi Uzma
Anjuman College of Engineering and Technology, India

ABSTRACT

Behavior of any human is mostly permanent as per their personality, but it gets influenced by a variety of factors originating psychologically and socially. However, some temporary factors such as attitude, surroundings, instant mood, culture, etc. may hamper behavior severely. Researchers have published many articles depending upon human behavior and its approach. This study is aimed to describe the effect of external parameters on human behavior in Indians as well as Europeans due to COVID-19 outbreak globally. This study is a survey made on online platform in Indian premises and studies carried by researchers in four European countries: UK, France, the Netherlands, and Denmark. Comparisons have been done with different levels and parameters between India and European countries. This chapter not only concludes the psychological constraints but also the good habits adopted by peoples during COVID-19 pandemic to have a safer future.

ABOUT THE AUTHORS

Dr. Tasneem K.H. Khan is working as Assistant Professor with Anjuman College Of Engineering & Technology, Nagpur (NAACAccredited). She is having 18 years of teaching experience. She did her Ph.D from Rashtra Sant Tukadoji Maharaj Nagpur Universit , Nagpur . Her area of interest is Medicinal Chemistry and Environmental Chemistry. Number of research papers have been published in journals and conferences.

Dr. Dilipkumar Bhupenchandra Rana is having teaching experience of 15 years that includes 13 years in Engineering and 2 years in Science College. Presently he is working as Associate Professor in S. B. Jain Institute of Technology, Management and Research, Nagpur (NAAC Accredited with "A" Grade). He has served as environmental analyst in Environment Division of Ambuja Cements Pvt. Ltd. at Chandrapur, Maharashtra. He also worked as "R & D" (Research and Development) chemist in a drug manufacturing unit in Chandrapur, Maharashtra.
His specialization is Physical Chemistry and elective as Environmental Chemistry. His Ph. D work in "Greywater i.e. domestic waste water treatment won national and international prizes. His portable greywater water system has been awarded by a Copyright by Government of India.

Dr. Gaurav Bhosekar has teaching experience of 12 years in engineering colleges and 1 work experience in industry. Presently he is working as Assistant Professor in Jhulelal Institute of Technology, Nagpur. He has also worked as a Project Assistant at National Chemical Laboratory, Pune for 2 years.
He has received Ph.D degree from University of Kiel, Germany. He is specialized in Inorganic and Industrial Chemistry. His work focuses on Inorganic Solid State Aspects of Coordination Polymers: Synthesis, Structure and Properties of New Transition Metal Complexes.
He has published 14 research papers in various international journals. Also, he has presented papers in various International and National conferences. He has received financial aid for his research work from BCUD, SP University of Pune.

Dr. Mrs. Archana P. Shetye is having teaching experience of 11 years. Presently, she is working as an Assistant Professor at Priyadarshini Indira Gandhi College of Engineering, Nagpur. She has completed her M. Sc. (Organic Chemistry) and Ph.D. from Swami RamanandTeerthMarathawada University, Nanded. Her research interest is in Hetercyclic Compounds and she has published 5 International Journal publications and 35 National Journal publications.

Preface

This book covers key areas of Physical Science. The contributions by the authors include intrinsic frequency, Membrane technology, helical symmetry, mass density, schrodinger equation, Electromagnetic radiations, photoelectric effect, fuzzy quantum probability, fuzzy wave function, membership function, membership degree amplitude, fuzzy probability amplitude, validation accuracy, coronavirus infection, Bernstein inequality, Erdös-lax inequality, polynomials, maximum modulus, Evaporation, crystal growth, electro-optics, Maredan clay, heterogeneous catalyst, biodiesel, photocatyalatic activity, viscosity, nuclear fusion, Euler's equation, astrophysics, electromagnetic interaction, particle physics, classical color theory, Azimuthal distributions, anode blocks, vacuum microwave sources, collision regulations, multiple ship situations, gravity quantization, cosmological constant, dark energy, dark matter, Binary asteroid, surface equilibrium, surface dynamics, surface mass shedding, Newton gravitational constant, angular velocity, cosmology, extended space model, gravitational impact, non-zero vacuum pressure. This book contains various materials suitable for students, researchers and academicians in the field of Physical Science.

Effect of Glycine Dopant on FTIR Spectrum of Ammonium Dihydrogen Phosphate (ADP) Crystal Grown by Slow Evaporation, Rotation and SR Methods

A. Z. Khan [a*ω] and Z. S. Khan [bω]

DOI: 10.9734/bpi/ntpsr/v6/2314A

ABSTRACT

Diverse molar concentrations of Ammonium Dihydrogen Phosphate crystals doped with Glycine (GADP) have been generated using different processes, including slow evaporation, rotation, and Sankaranarayanan - Ramasamy (SR) procedures. ADP crystals have found many applications in Non-linear optics, electro-optics, and transducer devices. On the developed GADP crystals, the Fourier Transform Infrared (FTIR) researches have been widely examined. The extra peaks in the FTIR spectrum that correspond to the functional groups of Glycine reveal the interaction between ADP and the dopant. The presence of all functional groups in the substance is confirmed by FTIR's standard spectrum statistics. When compared to the conventional slow evaporation method created Glycine doped ADP crystals, the spectra for ADP crystals doped with Glycine grown by Rotation and SR procedures had identical peaks with minimal variance.

Keywords: Evaporation, crystal growth, electro-optics, ADP Crystals

1. INTRODUCTION

In material science and engineering, crystal growth is a fundamental concept. The vast majority of crystal growth research has focused on practical approaches rather than hypothetical exploration. For the manufacture of greater efficiency PV cells for surrogate energy, advancements in crystal formation are critical. For initial data acquisition and devices utilized for practical purposes such as ICs and sensors, crystals of the necessary diameter and precision are required. Adding small previously prepared crystals to the prepared solutions provides nucleating sites. A single seed crystal would result in a larger crystal [1-2]. Depending on the phase conversion method, techniques of crystal growth can be classified as growth from solid, vapour, melt and solution [3]. The various methods of solution growth are studied by many researchers [4]. As the crystal growth is conceded at the room temperature, the structural impurities in the crystals grown by solution method are quite less [5].

Ammonium Dihydrogen Phosphate crystals have been extensively used as the 2^{nd}, 3^{rd} and 4^{th} harmonic generators for different laser applications which require short pulses of laser. ADP crystals have found many applications in Non-linear optics, electro-optics, and transducer devices. It is also used as Monochromator in X-ray fluorescence investigation. Numerous researchers have studied properties of pure and doped Ammonium dihydrogen phosphate crystals [6-7]. Amino acids with various molar concentrations have been used as an additive to grow ADP crystals [8]. Glycine (NH_2CH_2COOH) is considered to be the simplest amino acid among the 20 protein amino acids. In this research module; we have used amino acid Glycine as an additive in ADP in different

ω Assistant Professor,

molar concentrations. We have employed slow evaporation growth method, crystal rotation method and Sankaranarayana-Ramasamy method to grow pure and glycine doped ADP (GADP) crystals.

2. SYNTHESIS OF G-ADP CRYSTALS

ADP crystals have been grown by the method of conventional slow evaporation. Calculated amount of Ammonium Dihydrogen Phosphate (GR-grade) was dissolved in the water. Aqueous solution containing Ammonium dihydrogen phosphate was made based on the solubility curve of salt at the constant temperature under saturation state. Magnetic stirrer was used for stirring the solution. The solution was then stirred constantly for 8 hours to attain stability. Filter paper of 11µm dimension and filtration pump was used to filter the prepared solution.

The above process was repeated for calculated mole % of Glycine (Merck) dopant which was dissolved in Ammonium dihydrogen phosphate solution. Crystals of ADP and GADP with optically superior quality have been grown in the span of 20 - 30 days. The photographs of ADP and GADP crystals have been shown in Fig. 1.

Fig. 1. Photographs of GADP (left) and ADP (right) crystals

G-ADP crystals have been also grown by crystal rotation method and Sankaranarayanan-Ramasamy (SR) method [9].

2.1 FTIR Spectral Analysis

The grown crystals were grounded in pestle mortar to get fine powder. The fine powdered samples were then utilized for FTIR Spectral Analysis. Fourier Transform Infrared (FTIR) spectrum shows a fingerprint of the material with the peaks that correspond to the vibrational frequencies amongst the bonds of the atoms building up the substance. In IR spectroscopy, Infrared rays are allowed to pass through a target material. Several IR rays are absorbed by the material but few of them are transmitted through it. The ensuing spectrum thus represents the structural fingerprint of the material. Similar IR spectrum could not be produced by two distinctive molecular structures thus making IR spectroscopy helpful for various types of quantitative examinations.

4. RESULTS AND DISCUSSION

The Fourier Transform Infrared (FTIR) studies have been done on the crushed samples of pure Ammonium Dihydrogen Phosphate and Glycine doped ADP crystals. The FTIR spectra were observed in the region 400 to 4000 cm^{-1} with the use of KBr pellet. The standard spectra of functional

group were used to match the functional groups of pure and doped ADP crystals have been acknowledged. Functional groups of Pure ADP and Glycine doped ADP (GADP) crystals developed by conventional slow evaporation methods with different concentrations [1M% - 6M%] are shown in Fig. 2.

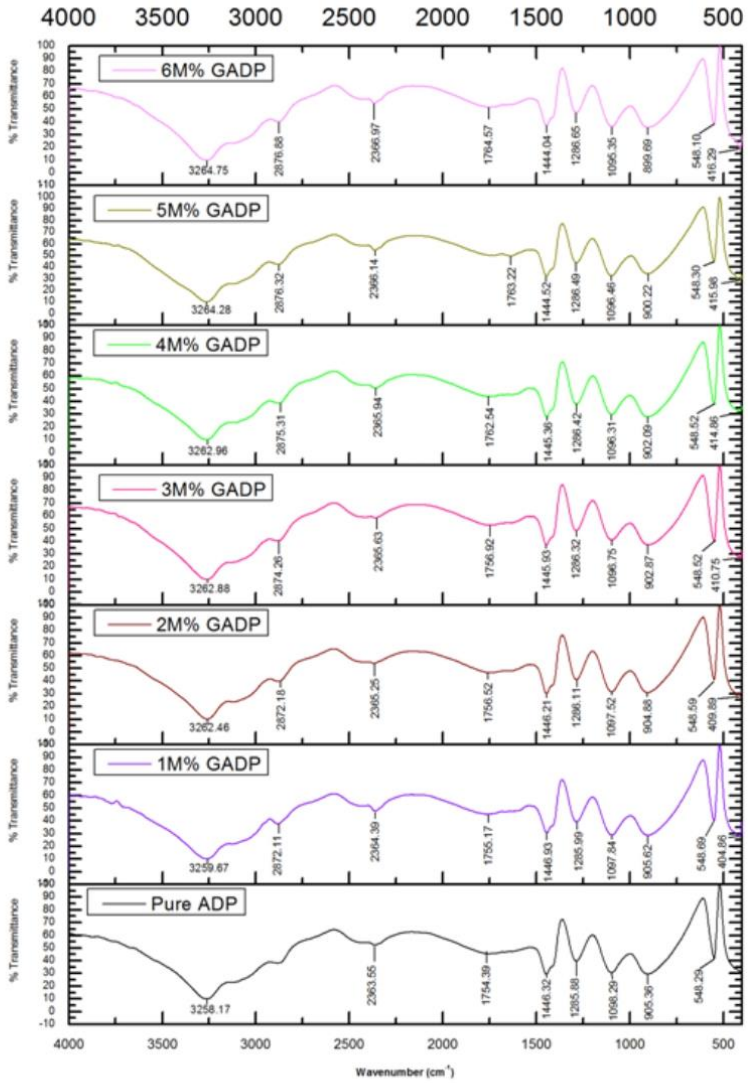

Fig. 2. FTIR Spectrum of ADP and GADP with various concentrations

The spectra reveal the interface between ADP and protein amino acid through the supplementary peaks which correspond to the functional groups of Glycine [10]. Standard FTIR spectrum statistics verifies all the functional groups present in the crystal. The above FTIR graph shows variations in the absorption frequencies due to variation in the bond length between O-H and P=O. Owing to the

variation in the bond length between P=O and O-H, change in the wave number (cm^{-1}) was observed in FTIR spectrum. Owing to the feeble force of attraction amongst the P=O and O-H bonds, optical characteristics of pure and doped Ammonium Dihydrogen Phosphate crystals are modified [11]. Amino acid doped ADP crystals were studied by many researchers [12-13]. Observed reallocation in the positions of the peak of PO_4 and P-O-H vibrations in the FTIR spectra confirms the interaction of ADP and amino acids. The FTIR spectra of pure ADP and GADP crystals have been shown in Fig. 2. In this research module, the FTIR spectrum of ADP shows that the O-H stretching vibration of H_2O was observed at 3258.17 cm^{-1} and CH_2 stretching mode just below 3000 cm^{-1}. Stretching of P-O-H at wave number 1098.29 cm^{-1} and ammonia N-H stretching at wave number 2363.55 cm^{-1} was observed. The peaks at 548.29 and 405.5 cm^{-1} show PO_4 vibrations and these results agree with the reported results [14-15].

The FTIR spectrum of Glycine (1, 2, 3, 4, 5 and 6 mole %) doped ADP (GADP) crystals disclose that due to the existence of Glycine into Ammonium Dihydrogen Phosphate, the position of the peaks have been moved to other wave numbers. The PO_4 vibration of the ADP is moved from 405.5 cm^{-1} to a maximum value of 416.29 cm^{-1}. Likewise, vibrations of P-O-H at 1098.29 and 905.36 cm^{-1} of the ADP are moved to lower side i.e. 1095.35 and 899.69 cm^{-1}, which confirms the existence of Glycine in the ADP crystal lattice [16].

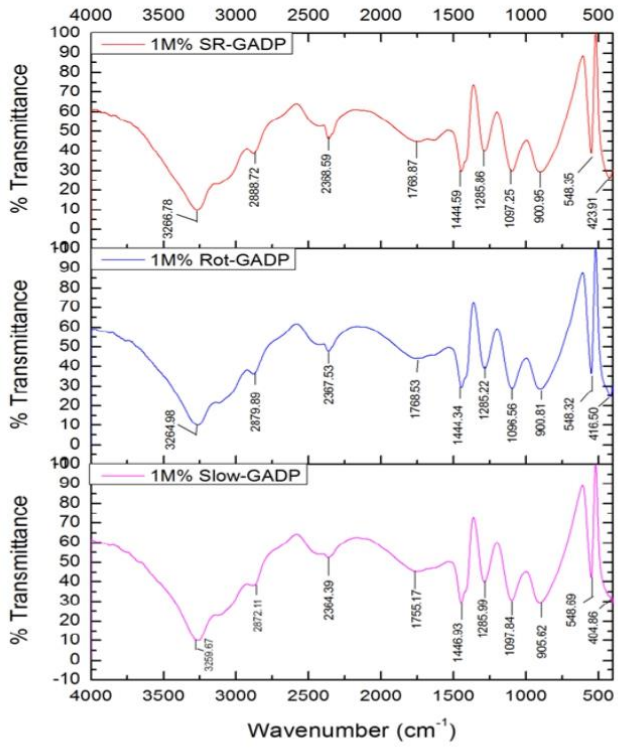

Fig. 3. FTIR spectrum of glycine (1M%) doped ADP crystal by different methods

Functional groups of Glycine doped ADP crystals grown by different methods are shown in Fig. 3. C = O stretching of –COOH group is assigned in the absorption range 1700-1800 cm^{-1} and CH_2 vibrations

of glycine give their peak in the range 2872.11 to 2876.88 cm^{-1} which are missing in pure ADP spectrum [17]. Due to high concentrations of dopant, the -NH group hydrogen stretching which was observed at wave number 3500 - 3000 cm^{-1} is broadened to some extent. Some kind of interaction amongst -NH group of the ADP and the dopant is indicated by the shifting of peak from 2363.55 cm^{-1} to a maximum value of 2366.97 cm^{-1} [12]. The spectrum for Glycine doped (1M%) ADP crystals (Fig. 3) grown by Rotation (Rot-GADP) and SR (SR-GADP) methods also have similar peaks with minor difference as that of slow evaporation (Slow-GADP) method grown Glycine doped ADP crystals with slight variations. The PO_4 vibration of 1M% GADP crystal developed by slow evaporation, rotation and Sankaranarayanan-Ramasamy methods are found to be at 404.86, 416.50 and 423.91 cm^{-1} respectively. Also, the P-O-H vibrations are found at 1097.84 and 905.62 cm^{-1} for 1M% Slow GADP, 1096.56 and 900.81 cm^{-1} for rotation and 1097.25 and 900.95 cm^{-1} for SR method grown GADP crystals, which again confirms that Glycine is present in ADP crystals. CH_2 vibrations of glycine give their peak at 2872.11, 2879.89 and 2888.72 cm^{-1} for slow, rotation and SR grown GADP crystals respectively. The vibration frequencies shows that hydrogen bonding results in O-H group stretching frequencies of ADP and COOH group of Glycine [18-19].

4. CONCLUSION

The Fourier Transform Infra-Red (FTIR) analysis was performed on the grown ADP samples. The effect of Glycine used in this research module on the vibration frequency assignments of functional groups of ADP and GADP crystals have been recognized by Fourier Transform Infrared (FTIR) Spectroscopy. Matching of functional groups with the standard spectrum was done. The FTIR spectra validate the interaction between ADP and the dopant by the extra peak which corresponds to the functional groups of Glycine. The peaks analogous to C = O stretching of –COOH group and CH_2 vibrations of glycine confirms the incorporation of dopant into the ADP crystal lattice. The variation in the values of SR grown GADP crystal shows that it can modify the transparency and strength of the Ammonium Dihydrogen Phosphate crystals, better than the crystals grown by slow evaporation and rotation methods. Fourier Transform Infrared (FTIR) spectra of the specimens validate the presence of functional groups in them.

COMPETING INTERESTS

Lot of basic science owing to the property of the crystal depends on the production of high-quality crystals with reasonable size. Buckley (1951) has elegantly put the matter, “It should be remembered that, in the preparation of large crystals, the touch of the artist is about as important as the application of established scientific principles." The role of Glycine on the quality and growth rate of ADP crystal grown in conventional method, rotation method and SR method has been studied and it showed that the properties of the crystals are enhanced. More properties like HRXRD, piezoelectric studies and NMR can be studied to exploit these types of crystals in various applications. The effect of some more amino acids doped unidirectional crystals can be attempted.

RASHTRASANT TUKADOJI MAHARAJ NAGPUR UNIVERSITY, NAGPUR

Established by Government of Central Provinces Education Department by Notification No. 513, dated the 1st of August, 1923 & presently a State University governed by Maharashtra Public Universities Act, 2016 (Mah. Act No VI of 2017)

(Academic Section)

Jamnalal Bajaj Administrative Building, Campus Square to Ambazari T-Point Road, Nagpur-33.

No. Acad/Dir/2022/245 Date, 17th March, 2022

19/3/2022

NOTIFICATION

It is notified for general information of all concerned that the following persons are hereby nominated by the Board of Studies & Ad-hoc BOS on the committee to be constituted by the Board of examination and Evaluation Under section 48(3)(a) (iv) of Maharashtra Public University Act, 2016 to appoint paper setters, Examination and Moderation, mentioned against their name in its annual meeting held in the month of April, 2020.

The term of the following nominated members shall be as per section 62(2) & 63 of Maharashtra Public University Act, 2016 i.e. up to 31st August, 2022.

Faculty of Science & Technology

Nominated person by the Board of studies & Ad-hoc BOS Under section 48(3)(a) (iv) of Maharashtra Public University Act 2016

ABOUT THE AUTHORS

Dr. Tasneem K.H. Khan is working as Assistant Professor with Anjuman College Of Engineering & Technology, Nagpur (NAACAccredited). She is having 18 years of teaching experience. She did her Ph.D from Rashtra Sant Tukadoji Maharaj Nagpur University , Nagpur. Her area of interest is Medicinal Chemistry and Environmental Chemistry. Number of research papers have been published in journals and conferences.

Dr. Dilipkumar Bhupenchandra Rana is having teaching experience of 15 years that includes 13 years in Engineering and 2 years in Science College. Presently he is working as Associate Professor in S. B. Jain Institute of Technology, Management and Research, Nagpur (NAAC Accredited with "A" Grade). He has served as environmental analyst in Environment Division of Ambuja Cements Pvt. Ltd. at Chandrapur, Maharashtra. He also worked as "R & D" (Research and Development) chemist in a drug manufacturing unit in Chandrapur, Maharashtra.
His specialization is Physical Chemistry and elective as Environmental Chemistry. His Ph. D work in "Greywater i.e. domestic waste water treatment won national and international prizes. His portable greywater water system has been awarded by a Copyright by Government of India.

Dr. Gaurav Bhosekar has teaching experience of 12 years in engineering colleges and 1 work experience in industry. Presently he is working as Assistant Professor in Jhulelal Institute of Technology, Nagpur. He has also worked as a Project Assistant at National Chemical Laboratory, Pune for 2 years.
He has received Ph.D degree from University of Kiel, Germany. He is specialized in Inorganic and Industrial Chemistry. His work focuses on Inorganic Solid State Aspects of Coordination Polymers: Synthesis, Structure and Properties of New Transition Metal Complexes.
He has published 14 research papers in various international journals. Also, he has presented papers in various international and National conferences. He has received financial aid for his research work from BCUD, SP University of Pune.

Dr. Mrs. Archana P. Shetye is having teaching experience of 11 years. Presently she is working as an Assistant Professor at Priyadarshini Indira Gandhi College of Engineering, Nagpur. She has completed her M. Sc. (Organic Chemistry) and Ph.D. from Swami RamanandTeerthMarathwada University, Nanded. Her research interest is in Heterocyclic Compounds and she has published 5 International Journal publications and 35 National Journal publications.

ABOUT THE AUTHORS

Dr. Tanveer Quazi, Assistant Professor in Physics, Anjuman College of Engineering and Technology Nagpur, has 15 years of teaching Experience and published 19 research papers in International and national journals and conference proceedings. He has participated and presented 22 research papers in various international and national conferences across India and abroad. He has worked on DRDO research Fellowship, received Visiting Scientist Fellowship- ICTP Federation Scheme (Funded by UNCSCO and IAEA)), Trieste, ITALY and was awarded INSA-DST FELLOWSHIP For SRF(National Science Academy). He has also worked at BARC Mumbai. His area of research includes Physics and Materials Science.

Dr (Ms) Jasmirkaur Randhawa, Assistant Professor in Physics, Government College of Engineering Nagpur has 22 years' experience of teaching Physics at Engineering and M Sc Physics. Her research interests are Electrochemical Gas Sensors, Composite materials and Impedance Spectroscopy. She is recipient of Prof. Suresh Chandra Medal for Best Paper Presented in 4th National Conference on Solid State Ionics, IIT Bombay. She has completed MODROBS project on materials' electrical characterization. She has published 18 research papers in National and International Journals and conference proceedings, an international book chapter and edited a book. She is granted a patent on CO2 sensor.

Ms Uma V. Gaikwad, Assistant Professor in Physics, Priyadarshini Bhagwati College of Engineering Nagpur, has over 18 years of teaching Experience. She has published papers in International, national journal and two book chapters have been published in Apple Academic Press, CRC, Taylor and Francis. She has participated and presented research papers in various international and national conferences across India. Her area of research includes Physics and Materials Science.

Ms. Smita Chandar Tolani, Assistant Professor in Applied Physics. St. Vincent Pallotti College of Engineering And Technology Nagpur is recipient of Ram Chandra Chandurkar Gold Medal, K. L Seth Gold Medal, National Crystallography Award, and P. L Khare Prize in Physics. She has 16 years of teaching experience and number of publications in reputed journals, National/International conferences. She has authored a book and wrote chapters in three reputed national book publications on Physics, Research and Management. She is a columnist and writes for local newspapers. Her areas of interests include Solid State Physics, Materials Science, Vedic Mathematics, HR Management.

Dr. Prashant Ambekar, Assistant Professor in Physics, Dharampeeth M. P. Deo Memorial Science College, Nagpur since 2003 has 23 years of research and teaching experience. He has received SRF (Direct Awardee) CSIR, New Delhi and Summer Research Fellowship jointly awarded by IAS, Bangalore, INSA, New Delhi and NASI, Allahabad for three times. He has completed two minor research projects of UGC WRO, Pune and published 21 papers at National/International journals and conferences and authored an international book chapter (Taylor and Francis). He is granted a patent on CO2 sensor. He has designed and developed instruments for UG/PG laboratories. His research interest includes Electrochemical gas sensors, photocatalytic water splitting, DSSCs and nanomaterials.

Dr. Shahin Sayyad, is working as an Assistant Professor with Shri. Shivaji Science College, Amravati. She has teaching experience in Engineering and Science Colleges. He has received MANF National Fellowship for regular Ph.D work. She has published 16 research papers in reputed International and national journals and conference proceeding in India and abroad. One book chapters have been published in Advanced Nanomaterials and Nanotechnology, Springer publication. Her area of research is lead free piezoelectric materials and synthesis of nanomaterials.

Effect of Glycine Dopant on FTIR Spectrum of Ammonium Dihydrogen Phosphate (ADP) Crystal Grown by Slow Evaporation, Rotation and SR Methods

A. Z. Khan [a*ϖ] and Z. S. Khan [bϖ]

DOI: 10.9734/bpi/ntpsr/v6/2314A

ABSTRACT

Diverse molar concentrations of Ammonium Dihydrogen Phosphate crystals doped with Glycine (GADP) have been generated using different processes, including slow evaporation, rotation, and Sankaranarayanan - Ramasamy (SR) procedures. ADP crystals have found many applications in Non-linear optics, electro-optics, and transducer devices. On the developed GADP crystals, the Fourier Transform Infrared (FTIR) researches have been widely examined. The extra peaks in the FTIR spectrum that correspond to the functional groups of Glycine reveal the interaction between ADP and the dopant. The presence of all functional groups in the substance is confirmed by FTIR's standard spectrum statistics. When compared to the conventional slow evaporation method created Glycine doped ADP crystals, the spectra for ADP crystals doped with Glycine grown by Rotation and SR procedures had identical peaks with minimal variance.

Keywords: Evaporation, crystal growth, electro-optics, ADP Crystals

1. INTRODUCTION

In material science and engineering, crystal growth is a fundamental concept. The vast majority of crystal growth research has focused on practical approaches rather than hypothetical exploration. For the manufacture of greater efficiency PV cells for surrogate energy, advancements in crystal formation are critical. For initial data acquisition and devices utilized for practical purposes such as ICs and sensors, crystals of the necessary diameter and precision are required. Adding small previously prepared crystals to the prepared solutions provides nucleating sites. A single seed crystal would result in a larger crystal [1-2]. Depending on the phase conversion method, techniques of crystal growth can be classified as growth from solid, vapour, melt and solution [3]. The various methods of solution growth are studied by many researchers [4]. As the crystal growth is conceded at the room temperature, the structural impurities in the crystals grown by solution method are quite less [5].

Ammonium Dihydrogen Phosphate crystals have been extensively used as the 2^{nd}, 3^{rd} and 4^{th} harmonic generators for different laser applications which require short pulses of laser. ADP crystals have found many applications in Non-linear optics, electro-optics, and transducer devices. It is also used as Monochromator in X-ray fluorescence investigation. Numerous researchers have studied properties of pure and doped Ammonium dihydrogen phosphate crystals [6-7]. Amino acids with various molar concentrations have been used as an additive to grow ADP crystals [8]. Glycine (NH_2CH_2COOH) is considered to be the simplest amino acid among the 20 protein amino acids. In this research module; we have used amino acid Glycine as an additive in ADP in different

A TEXTBOOK ON

INDIAN CULTURE & CONSTITUTION

As Per Syllabus Of RTM Nagpur University B.E.

A Complete Text Book For B.E. Second Semester

Dr. Mrs. Nawaz F. Khan

Alliance & Co.

ABOUT THE AUTHORS

Dr. Nawaz F. Khan is presently working as an Associate Professor in Anjuman College of Engineering & Technology. She is having 26 years of academic experience. She is Ph.D., M.Phil. and Post Graduate in Sociology, Economics and Management. She has authored books on Social Sciences and Humanities. This book is an attempt to help students update their knowledge towards Indian Culture and Constitution

Book Title	Introduction to Cryptocurrency and Cyber Security
Author Name	Dr. CUDDAPAH ANITHA, Dr. S. SREETHAR, Dr. AHMED SAJJAD KHAN, Prof. CHAITALI SHEWALE.
ISBN	978-93-5762-085-7

ABOUT THE AUTHORS

Akash M Langde is working as Professor in Mechanical Engineering Department and Dean, Research & Development at Anjuman College of Engineering and Technology, Sadar, Nagpur-440001, Maharashtra, India. He has 23 years of teaching experience of which 10 years as Head of Department of Mechanical Engineering till Sep 2022. He did his Post Graduation from VNIT Nagpur (2009) and research on "Effect of acoustic field and gas solid suspension of fine powder" receiving Doctoral degree in 2011. His areas of interests includes Thermal Engineering, Sound assisted fluidization with nano and micron size particle, Hydraulic Machines, heat transfer in radiator and evaporator, acoustic field for refrigeration, solar energy for drying and distillation, Refrigeration & Air Conditioning and Project Planning and Management.
He is reviewer of prestigious journals such as 'Powder Technology' (Elsevier) and reviewer of many national and international conferences. He has published/presented 42 research papers in National, International Journals/Conferences, winning many best paper awards. He has guided many PG and PhD scholars. He has received grants from AICTE for research funding, STTP and students activity. He has organized National and International conference and several STTP's. He was the Chairman of Board of Studies of Industrial Engineering, Member of Board of Studies of Mechanical Engineering Rastrasant Tukdoji Maharaj, Nagpur University and other autonomous colleges.
Professor Akash Langde is a life member of Indian Society for Technical Education, New Delhi, Associate Member The Institute of Engineers (India), and Member of ISHRAE India

Nafees Pervez Khan is a Assistant Professor in Department of Mechanical Engineering at Anjuman College of Engg & Technology, Nagpur (MS). He has an expereince of about fifteen years in the field of teaching and one year in the field of Industry . He has completed Diploma in Mechanical Engg from Govt Polytechnic Nagpur and then acquired his B.E (Mech Engg) & M.Tech (ME Design) from RTM Nagpur University. He was awarded Doctor of Philosophy (Ph.D) in the filed of Science & Technology from RTM Nagpur University on topic "Hydrodynamic study of micron size particle in presence of an acoustic field" in 2020. He has intersest in the field of research which led him to publish sixteen resesrch papers in International Journals and nine research paper in National and International conferences. He is teaching courses in engineering design and thermal engineering. He participated in 30 Faculty Improvement programmes (FDP/STTP) on various topics. He has guided many research projects of UG and PG students in the filed of Design and Thermal Engineering.

Mohammad Shakebuddin is presently working as Assistant Professor and M Tech incharge in Anjuman college of Engineering and Technology, Nagpur. He completed his graduation (Mechanical Engineering) degree and earned Master's (CAD CAM) degree from Nagpur University. He was awarded Doctoral degree in Mechanical engineering from Nagpur University and topic of research was "Effect of variable acoustic field on fluidization behavior of fine powder". He has more than 2 decades of experience in industry, teaching and academics and research. His area of specialization is theory of machines, vibration, I.C engine, Dynamics of machines, and Finite element analysis. He has also guided UG and PG students. He has worked for the syllabus revision committee of Nagpur University. He has published several research papers in reputed national and international journals and presented numbers of paper in conferences. He also organized national and International conferences. He is also a member of institution of engineers and ISTE (life member, ISTE)
